Experience

Software Engineer Mar. 2026 – Current
Jonas Software *Melbourne, VIC*

- Delivered full stack features in TypeScript, Node.js, C# and React, from database design to deployment.
- Built REST APIs and webhooks in TypeScript/Node.js and C#, connecting our systems with third party services.
- Integrated Claude and other LLM APIs into development workflows, building AI enabled automation.
- Rapidly diagnosed and resolved a business-critical outage for a major client, restoring functionality within days.
- Led technical discovery with product managers and engineers, turning business requirements into shippable solutions.
- Documented system architecture and API integrations to support sales and support teams.
- Containerised applications with Docker and deployed to AWS/Azure for scalable builds.

Software Engineering Analyst Feb. 2025 – Mar. 2026
Accenture *Melbourne, VIC*

- Wrote and reviewed code and SQL queries against project requirements.
- Worked with senior engineers to identify and triage software defects.
- Analysed use case requirements to design and execute testing strategies.

Software Developer Intern Oct. 2022 – Mar. 2023
Diversus *Perth, WA*

- Developed responsive, accessible user interfaces using TypeScript, React and Next.js for client projects.
- Built React components integrating web APIs such as Mapbox.
- Developed UI components against the Sitecore CMS for client sites.

Education

Edith Cowan University Perth, WA
Bachelor of Computer Science, Majoring in Software Engineering (Distinction Average) *Graduated June 2025*

Projects

Covet - Job Tracker | *Java, TypeScript, React, PostgreSQL, AWS*

- Engineered a full-stack job application tracker using React, Vite and Java Spring Boot with JDBC for PostgreSQL.
- Implemented secure JWT authentication with refresh token rotation.
- Containerized the app with Docker and deployed via Terraform, adding Redis caching and automated integration testing.
- Designed a normalized PostgreSQL schema with JSONB notes, versioning and full-text search.

InvoiceIT | *C#, ASP.NET, Javascript, SQL, CSS*

- Developed database schema and application designs to meet user requirements.
- A web based application in ASP.NET with responsive user interface and secure login that generates invoices.
- ASP.NET with simple styling for front-end, C# for backend code with a SQL database.

Technical Skills

Languages: TypeScript, Java, C#, Python, SQL, HTML, CSS/SCSS
Frameworks: React, Node.js, Spring Boot, ASP.NET
Tools & Cloud: Docker, AWS, Azure, Git, PostgreSQL
AI & Practices: Claude/LLM APIs, REST APIs, Unit Testing, TDD, Agile
